

FITTINGS

Weatherproof Fittings

With the comfortable South African climate, time spent outdoors doesn't need to end when the sun goes down. The problem is that most electrical devices aren't necessarily equipped to withstand the forces of nature and often fail as a result. That's where Afcap's weatherproof fluorescent light fittings come in. These fittings come with either plastic or metal clips. The fitting is IP 65 rated for protection against dust and all weather conditions. These can be used in all outdoor areas, tunnel systems, mines and even areas with high humidity conditions. Below are some of the products included in this range.

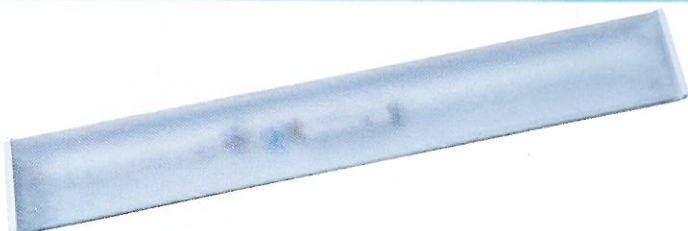

Open Channel Fittings

Open channel fluorescent fittings are fluorescent fittings where the tubes are exposed, as opposed to the alternative where the tubes are enclosed. It can be used in residential, commercial, industrial and all indoor applications where no weatherproofing or covering is required.

Recessed Fittings

Recessed fittings are a general area light source for lighting of large indoor areas. Afcap's recessed fittings use our electronic ballast devices. They can be used in any indoor commercial facility, such as offices and retail spaces.

Prismatic Wraparound Fittings

Afcap's prismatic wraparound fittings are IP55 rated and fitted with Afcap's reliable electronic ballast. It is a surface mount fitting and can be used in all indoor locations as a more upmarket general light fitting.
